

There is always an **uncompromising** element in every Business

We call it **SECURITY**

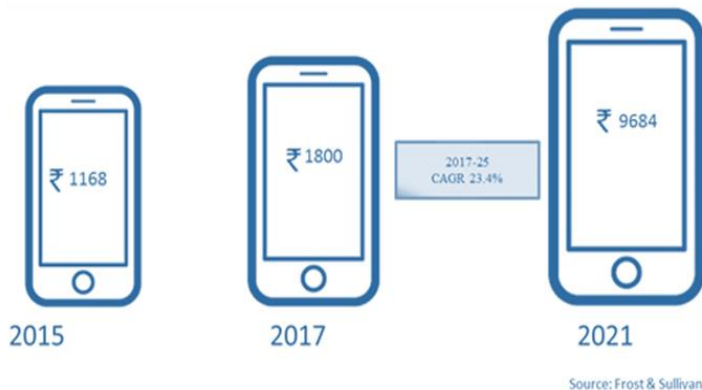

Today's truths

"There are only two kinds of companies in today's business world. Those that have been hacked... and those that don't know that they've been hacked."

THE WALL STREET JOURNAL.

For insurers, it's a bigger threat than for most, given the sensitivity of customer data.

Exponential growth of mobiles in India (Rs. billion)

- 33% of threats come from employees
- 25% come from extended enterprise (ex-employees / trusted partners)
- 87% result from inadvertent human error
- 82% result from lack of awareness / understanding of security threat

EVERY FIRM IS A SITTING TARGET

Nowadays, cyber attacks are becoming a state of normal

Username, Passwords

Steal personal info, account numbers, credit card numbers

Malware, Phishing

Enter your information network through innocent end-users

Identity hijack

From social media, email and other interactions

Botnets

Automated threats. Sends SPAM to others. Denial of Service.

Webservers

Through external interfaces. Site hacking. Use for unethical, illegal purposes

Enterprise Attacks

Policies, infra, leakage of consumer information

Motives: financial gain, attack firm reputation, obtain consumer information for identity fraud, extortion etc.

One incident can wipe out customer confidence built over decades

Why Outsource Security?

As enterprises grow, so does the requirement for global information exchange amongst employees, suppliers, partners and Service customers. However, as this information becomes more broadly distributed, threats to the confidentiality, integrity and availability of this information increase exponentially. The utmost negative impact of advancement of technology is an exponential increase in security threats such as Cyber threats, Malware infections, Phishing attacks, Web Application Attacks etc. All these security breaches may result in drastic revenue loss, legal liabilities, diminished productivity and brand erosion. It becomes imperative for Enterprises to look out for those partners, who can work with them to build up business aligned information security framework and improve the ROSI (Return on Security Investment).

- Ability to take action at the attacker edge

GO Wide

- Rapid Web crawling for targeted threats
- In-the-wild payload analysis and detonation
- Dynamic Web frontier management along with ad-hoc frontier variations

Managed Security Services

CypherSec Managed Security Services reducing their risk in today's ever-changing security threat environment. Balanced approach, maintaining compliance, proactive security stance focus and flexible delivery model. The service offerings are bundled in a manner so as to take care of the entire security operation of the customer's infrastructure environment.

Report

- CXO
- Compliance
- Developer

Managed EndPoint Security Services

- Malware removal
- Compliance Management
- SIEM
- Outsourcing and Out-tasking

Security Testing

CypherSec Services designed to protect your information. Our comprehensive and practicable range of security solutions comes from our own production and the cooperation with selected suppliers.

Security Testing

- Web application security hybrid testing (automated + manual)
- Network security testing
- Data loss prevention
- Mobile Apps security testing

Why CypherSec?

Differentiator

People { Large Pool of Security Resources

Innovation { Dedicated innovation technology centre provides POC, technology refresh & optimization process

Cost { We offers world class security services to improve customer's ROSI (Return on Security Investment)

Experience { Large enterprise clients for information security

Benefits to customers

Expertise on Tap across the breadth of information security domain.

Lower investment on new

Reduce operation cost hassle free handling of domain experts, no effect of attrition, increase efficiency & profitability

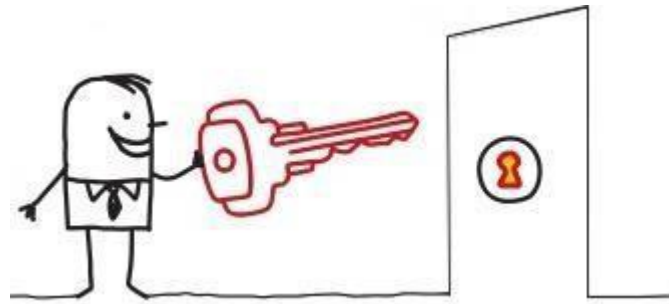

Experience through leadership & availability of huge knowledge base.

Your Security Is Our Goal

EFFICIENT AND TAILOR-MADE SECURITY PROCESSES

The reliable protection of your assets information, workforce, processes and infrastructure can only be achieved by means of a well-structured, methodical security process.

CypherSec provides you with the modular service range you need. Our services are based on internationally recognized standards such as GDPR, ISO 27001, OWASP, ITIL, WASC and BSI-Base Protection and our longstanding experience.

Securing The Information Over The World
